Plastic bottles and other plastic waste are shredded and melted down in order to produce new polyester fibers from them, recycling greatly reduces water consumption, CO_2 emissions and waste, but the use of different plastic products leads to difficulties in the dyeing process and rPET often requires repeated dyeing processes, in addition the material is not biodegradable and releases microplastics into the environment, for these reasons experts disagree about the sustainability of the material, general characteristics like conventional polyester

rib knit
right/right product, equal in- and outside, often used for collar and cuffs, high elasticity, low material weight, difference between 1x1 rib (alternately knitted left and right) and 2x2 rib (alternately 2 left and 2 right stitches)

ring-spun cotton
softer, finer, smoother and more shiny than open end yarn, optimal printability

rip stop
typical chequered structure due to a special weaving technique, mostly made of nylon, characteristics: particular tear-resistant and strong

semi combed cotton
instead of 3 combing processings there is only one, result is a semi-finished product between carded (not combed) and combed cotton

set-in sleeves
straight set sleeves

single jersey
fine knitted, stretchy, breathable material, inside and outside different (left/right loops), material of most t-shirts

single ply terry
made of fine single yarns, fine loops get twisted and connected, softer and more absorbent fabric, more resistant against pulling out threads

softshell jackets
functional jackets, usually made of 2 or 3 layers (with membrane), inside material (e.g. microfleece) provides isolation and transports the moisture away from skin, if existing, the membrane has windproof and breathable function, outside is made of water repellent material, that transports moisture to the outside, softshell jackets without membrane are more breathable, jackets with membrane are more wind and rain proof

stretch
marks stretchable fabrics including a share of certain materials like for example elastane or Lycra®

Teflon®
used for coatings, water and dirt repellent, not printable

terry cloth
cotton fabric typically used for towels, small loops on one or both sides, very soft, bulky and absorbent material

(T)PU coating
through an inside coating the material gets breathable and water repellent or even waterproof

tubular construction
if not specified differently, all models have side seams to adapt the fit, items without side seams are declared as tubular construction

twill
twill weave fabric, pattern of diagonal parallel ribs, most common use in denim fabrics, durable fabric with a warm and soft touch

viscose (rayon)
chemical fibre made from a natural basic material (cellulose), often referred to as artifical silk, eudermic, not stretchable, strong wrinkling, flowing fabric, very even surface, perfect for dyeing and printing

windproof
keeps the wind completely out, windproof products are not always waterproof, but waterproof articles are always windproof, materials that allow a maximum of 5 liters of air per second through one square meter of fabric are called windproof, windproof materials are often uncomfortable to wear due to the lack of breathability during activity
